Topic: “Renewable Energy”

The Commission on Sustainable Development, reminding all nations of the 7th Millennium Development goal,

Fully aware that renewable energy is the best solution to climate change,

Having devoted attention to the faults of nuclear energy,

Noting with deep concern the accidents at Chernobyl and Fukushima,

Aware that not all nations contain all renewable energy sources,

Guided by successful research done in the past,

Deeply concerned by the rising sea levels,

Having considered that renewable energy is a difficult issue to tackle,

1. Encourages all member states to provide the resources necessary to further study and develop nuclear energy and renewable energy sources;

Resolution CSD/2.1

2. Calls upon nations to increase their inherent renewable energy sources by 10%;
3. Calls upon developed nations to fund renewable energy for undeveloped nations;
4. Further invites member states to develop electric/biofuel transport systems;
5. Calls upon the UN to provide the funds for NGOs to provide renewable energy for harnessing supplies around the world;
6. Draws the attention to the fact that for the maximum benefit to people and the environment, sustainability must be part of renewable energy projects.
